This IREM Chicago Industry Partner Spotlight profiles: Built By Burke Concrete. A first class full-service Concrete Company; specializing in structural concrete and exterior restoration services for building owners, tenants, and property managers throughout the Midwest and Southwest for over 25 years.

Built By Burke is known for helping owners maintain both the structural integrity and visual appeal of their properties — while keeping businesses and tenants operational. Their services include structural slab and foundation repairs, new construction, parking garage work, parking lot work, ADA compliance upgrades, and site concrete replacement. They work closely with owners and property managers to phase work and accommodate building operations, minimizing disruption to tenants and customers. This approach remains a key focus for their 2025 service offerings.

Operations Manager, Edward Burke shared, “We recently completed a series of freezer slab replacements for a major food distribution facility. To keep the client fully operational, we engineered and built temporary heated enclosures within the freezers — allowing product storage and facility operations to continue without interruption while our team performed structural repairs in sub-zero conditions. It’s one example of how we adapt to client needs to maintain business continuity, even in the most challenging environments.

We welcome the opportunity to support owners and managers with both planned capital improvements and fast-turnaround repair needs — always with an eye toward operational continuity.”
